ANDREW SEMPREVIVO JOINS SEAKEEPER'S SALES TEAM

The leader in internal stabilization technology, Seakeeper recently appointed Andrew Semprevivo to international insides sales manger. In his new position, Semprevivo will be responsible for handling day-to-day operations, as well as sales, service and technical support inquiries worldwide. He will also work to expand Seakeeper's global distributor network, develop boatbuilder relationships and manage boat shows.

"After being aboard during a sea trial, I felt the Seakeeper Gyro would be the future of stabilization and I wanted to be a part of it," said Semprevivo. "Because the product is so revolutionary, I believe sales will continue to grow even during this troubled economy."

With extensive marine industry experience, Semprevivo has traveled across the world for business and worked in various countries, including Japan. Most recently, he served as the international/West Coast sales rep/project manager for Viking Yacht Company.

A control moment gyro, the state-of-the-art Seakeeper Gyro produces an amazing 7,000 Newton meter seconds of angular momentum or righting force. Actively controlled by motion sensors and computer processors, it optimizes torque and is highly effective over a range of conditions.
