

TESTIMONIALS

"The National Weather Service had a high wind advisory with winds over 39 mph. There were coastal flood warnings and tides were to be 2 foot above normal. Seas were expected to be 4-6' on LI Sound. I didn't have a good feeling about taking the boat out. The waves hitting the beach were massive and the wind and rain were fierce. You could not stand out in this and I immediately hopped back in the car. When I cleared the 5 mph buoy I headed due east with heavy sustained winds out of the north and with the single Seakeeper stabilizer on at 25-26 knots the bow rails were level! I turned it off and on and it went from swaying in the troughs to a level rail when I would reengage it. Truly remarkable! The clients could not believe it. To me it seemed like sitting in a roaring fireplace and not getting burned. My customer said: 'Take her back to the slip; I will take the boat (Azimut 62e)'"

-Michael F. Lennon, Marine Max Yacht Sales Manager, Huntington NY USA

"We have been caught in some mighty sloppy seas this past summer. Each time I say 'Thank Goodness for our Seakeeper'. It allows me to be a fair weather sailor on the worst of days. I love it!!!!"

-Mary Ann Xavier, Ovation 50 Boat Owner, Catalina Island CA USA

"On the way back from Stag Cruise we had the Commodore's of the Hong Kong, Victoria and Quebec yacht club who all walked away amaze. For fleet week here we spent two days on the bay with hundreds of boats, tons of chop and 2-3 ft seas all which barely budged our yacht. You all have an amazing product and a great culture of doing what it takes to help customers."

-Karl Jacob, Sunseeker 82 Boat Owner, San Francisco CA USA

"I felt the Seakeeper Gyro would probably be the most important piece of equipment for boats since the invention of the autopilot...it's at least, the most innovative piece of equipment I've come across in my 50 years in the marine industry"

-Jim McLaren, General Manager Orange Coast Yachts, Newport Beach CA USA

"There was a considerable amount of roll reduction, more than expected. It made a large difference and in my opinion, it's worth the money. If customers wanted to fit a stabilizer in their Maritimo, we would recommend a Seakeeper Gyro Stabilizer...with the ease of installation, virtually no vessel speed loss and an operating noise level lower than the gen-set required to run the unit, I am overall very happy with the installation, operation and performance of the system."

-Nick Barry-Cotter, Maritimo Engineer, Queensland Australia

"The Seakeeper 7000 series gyro has been evaluated in a Sunseeker 70 Manhattan Flybridge Yacht and has out performed all other similar units tested. It is a well engineered product that gives good roll reduction performance for its weight and size envelope."

-Dave Thomas, Marine Engineer, Sunseeker Design Office

"The Sea Keeper system allowed us to comfortably drift in a beam sea with minimal, if any roll. Any boater planning to spend a significant amount of time a low speed or at anchor should consider this extremely effective and virtually silent system."

-Nick Theios, Mikelson Yachts, Inc.

"The Seakeeper gyro is phenomenal. It does everything the company says it does. During the sea trial, there were four to six foot waves with an occasional eight-footer and I estimate that the gyro cut the rolling motion by over 50 to 70 percent. From the sky bridge, it was like day and night. You could really feel the difference."

-Bill Gibbons, Viking Yachts senior project manager

"We fished for at least twenty-six hours and the following day all eight fishermen felt like they never left the dock. No one was sore or tired from the trip. Now, I cannot imagine fishing without our Seakeeper working. I consider the Seakeeper one of the most important pieces of equipment onboard. When drifting or trolling at slow speed, the boat will not rock. The only movement is the boat rising and falling, making fishing totally comfortable and enjoyable. You cannot leave home without it."

-John Picone, Viking 76 Owner

"During the sea trials, the Seakeeper Gyros were incredible. It was like night and day. They really took all the jolt out of the rolls and I'm delighted with how steady they keep my boat. Now my wife and kids will come out with me more often."

-Ken Aldrin, Mikelson 65 Owner
