

## SEAKEEPER DISPLAY UPDATE PROCESS

---

PRODUCT      SEAKEEPER 5 (EM), 9, 16 (EM), 26, AND 35

### OVERVIEW

This document serves as a guide for updating the Seakeeper display interface from the 3.5" Pushbutton Display to the 5" Touchscreen Display. The 5" Touchscreen Display update is only available for Seakeeper-Series models produced with the 3.5" Pushbutton and does not apply to M-Series models.

### SEAKEEPER 5" DISPLAY

The Seakeeper 5" display features touchscreen operation, updated graphics, and an improved user interface. The display can be connected to modern MFDs via an NMEA 2000 or Ethernet network. Select Garmin, Raymarine, Simrad / Navico, and Furuno MFDs are currently supported by the 5" Touchscreen Display. Refer to the relevant Technical Bulletin on the Seakeeper [Technical Library](#) for MFD manufacturer-specific information and integration instructions. Compatibility cables for applicable MFD manufacturers are available through local Seakeeper Dealers. Adding the 5" display interface to a vessel's compatible MFD allows mounting the Seakeeper display in a remote location, freeing up space on the vessel's helm and reducing the need for multiple Seakeeper displays.

### DISPLAY UPDATE INSTRUCTIONS

If you currently have a 3.5" display unit and want to upgrade to a touchscreen display, a Seakeeper Display Upgrade Kit (P/N 90468) is available through your local dealer. The current Seakeeper run hours, sea hours, and serial number for each unit onboard the vessel, is required to program the upgrade kit hardware properly.

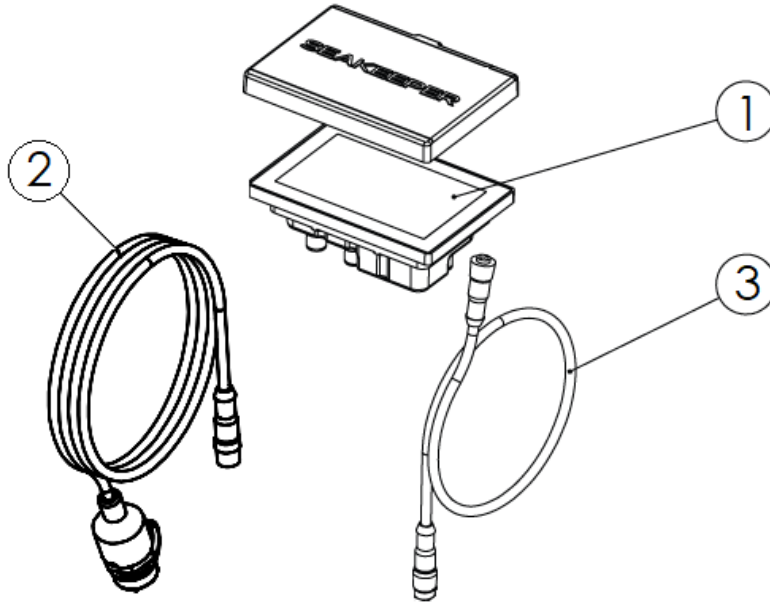

Contact your local [Seakeeper Dealer](#) to initiate the display upgrade process.
